Enhanced comfort and protection

Offering protection for the face and respiratory system, the GR50 is a hood-style respirator designed specifically to meet the challenges encountered daily by grinders and metalworkers.

The GR50 design lets continuous airflow be delivered through a unique neck cuff, maintaining positive pressure inside the hood helping to keep contaminants out. The GR50 can be used with convenient and low-cost Bullard Free-Air® pumps.

GR50

All-in-one protection

HMX features all-in-one protection for your head, face, and respiratory system. Welders and grinders feel assured knowing their head is protected, and their viewing area is enlarged for optimal vision.

The HMX outer viewing lens is available in clear or shades 5 and 10. The airflow in the HMX is designed to rush over and around the top of the head to deliver maximum cooling to the face while also providing superior respiratory protection.

HMX

Integrated protection

The SparxLift gives welders and grinders the option to choose either powered air or supplied air for their respiratory protection.

SparxLift's innovative design offers integrated eye and face protection. Its intuitive technology includes an auto darkening filter and the patented Inner Sense™ feature that detects the Radio Frequency (RF) signal produced by Tungsten Inert Gas (TIG) welders to darken the screen before the arc is struck.
